

DRAWING A FEMALE FACE

BY LOISH - WWW.LOISH.NET

This tutorial is basically a walkthrough of my own process for drawing a face, and is by no means intended as strict instructions. As an artist, the best thing you can do is develop a technique and approach that feels right to you, which is how I developed this process.

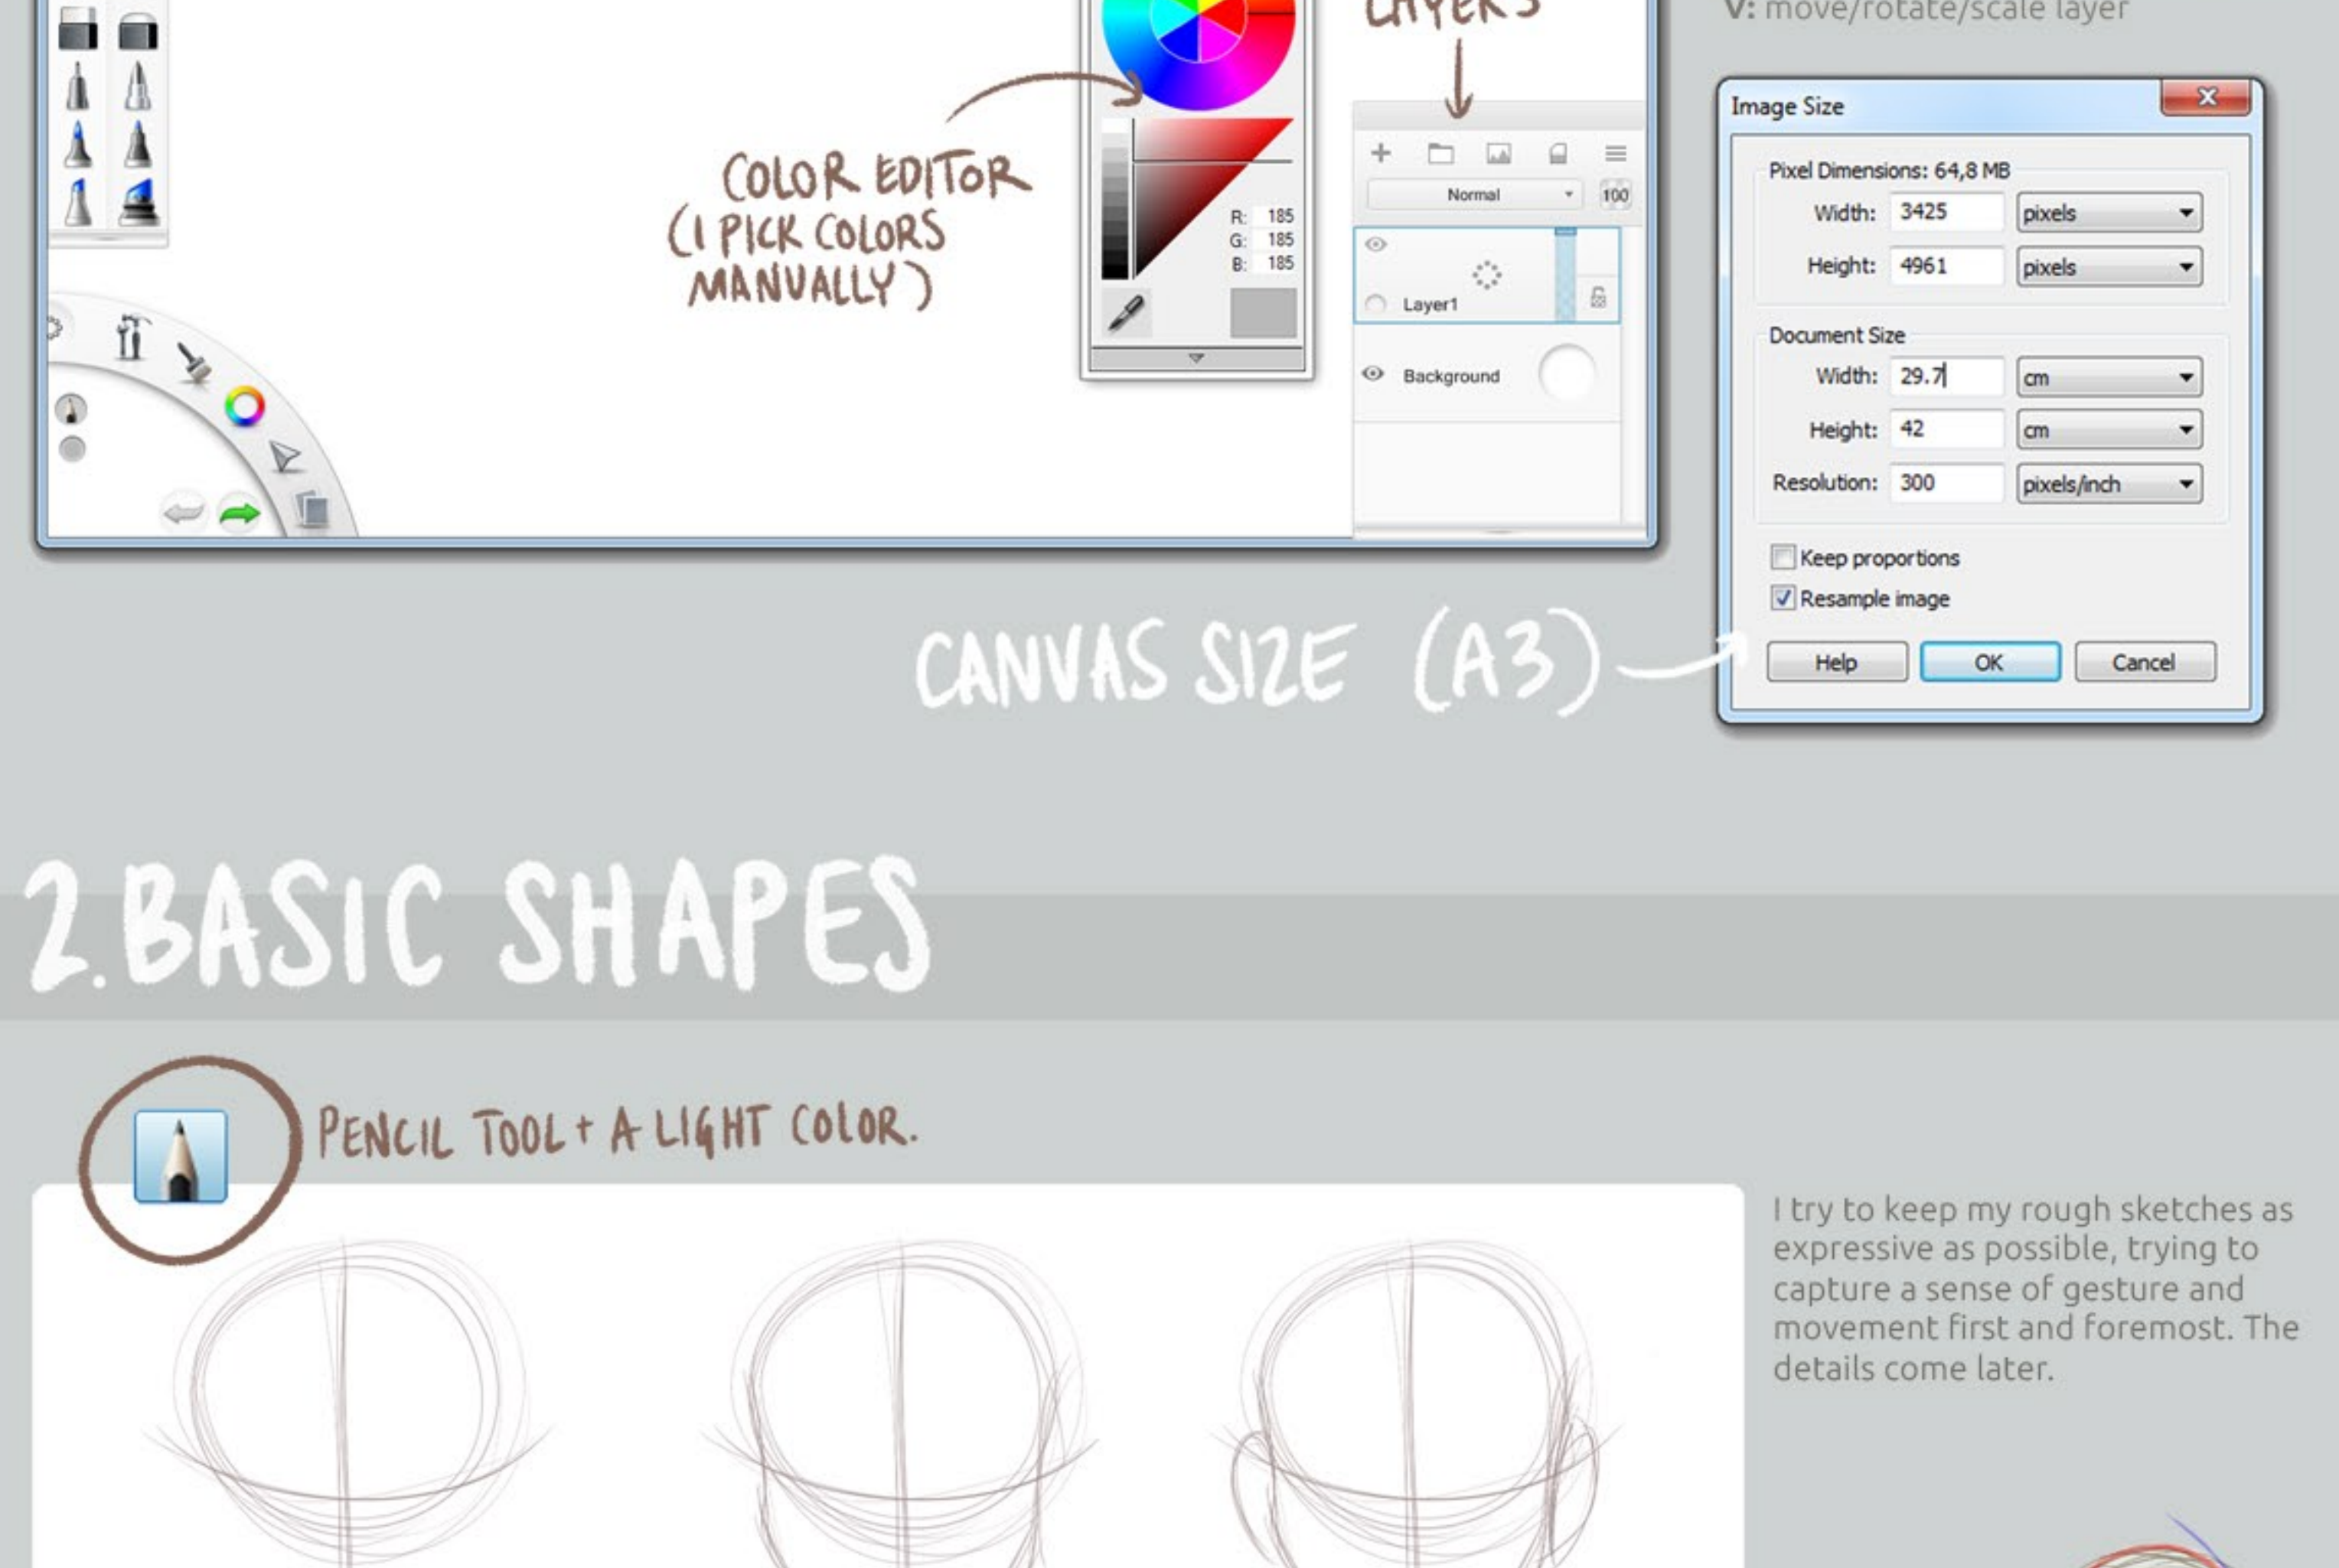

The most important things to keep in mind throughout the drawing process are:

- Expression:** What kind of emotion do you want the face to portray? Try to choose an expression that says something about the state of the character (peaceful, angry, vulnerable, etc). For the sake of this tutorial, I will be drawing a face with a fairly neutral expression and straightforward angle, but it is worthwhile to explore more expressions than simply neutral or blank ones.
- Life:** I try not to focus too much on getting things 'right' (symmetry, perfect details, smoothness, etc) but instead concentrate on giving the face a sense of life and personality. I try to keep the personality of the original sketch preserved in the end result, and leave the smaller details until the way end.

1. SETUP

The process I describe here can be applied to basically any digital drawing program that has basic layer and brush functions. When starting out, the most important things for me are:

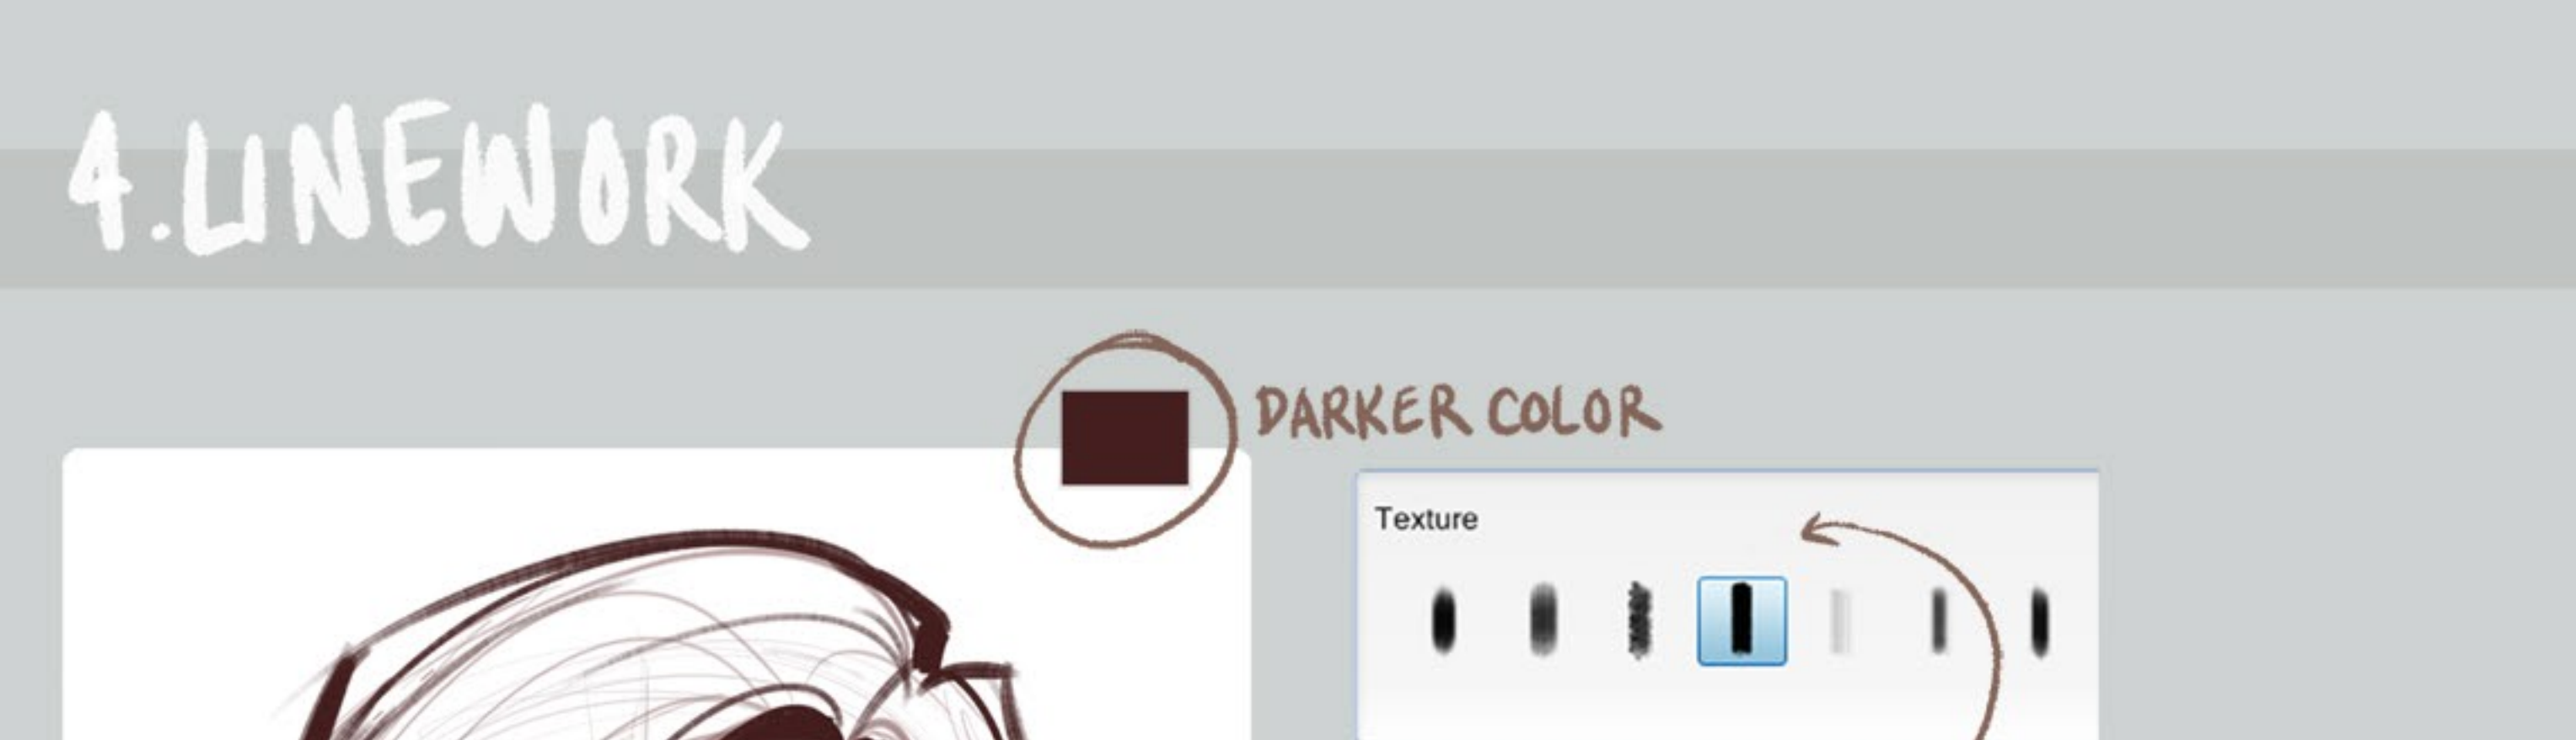

1. **A large canvas:** I usually work on A3 format, 300DPI, so that the quality is suitable for printing.
2. **Clutter-free workspace:** I keep only the essential panels open, which for me are mainly my tools, layers, and color editor.
3. **Useful shortcuts:** If I have access to my eyedropper and navigation shortcuts, I'm good to go!

2. BASIC SHAPES

3. ROUGH SKETCH

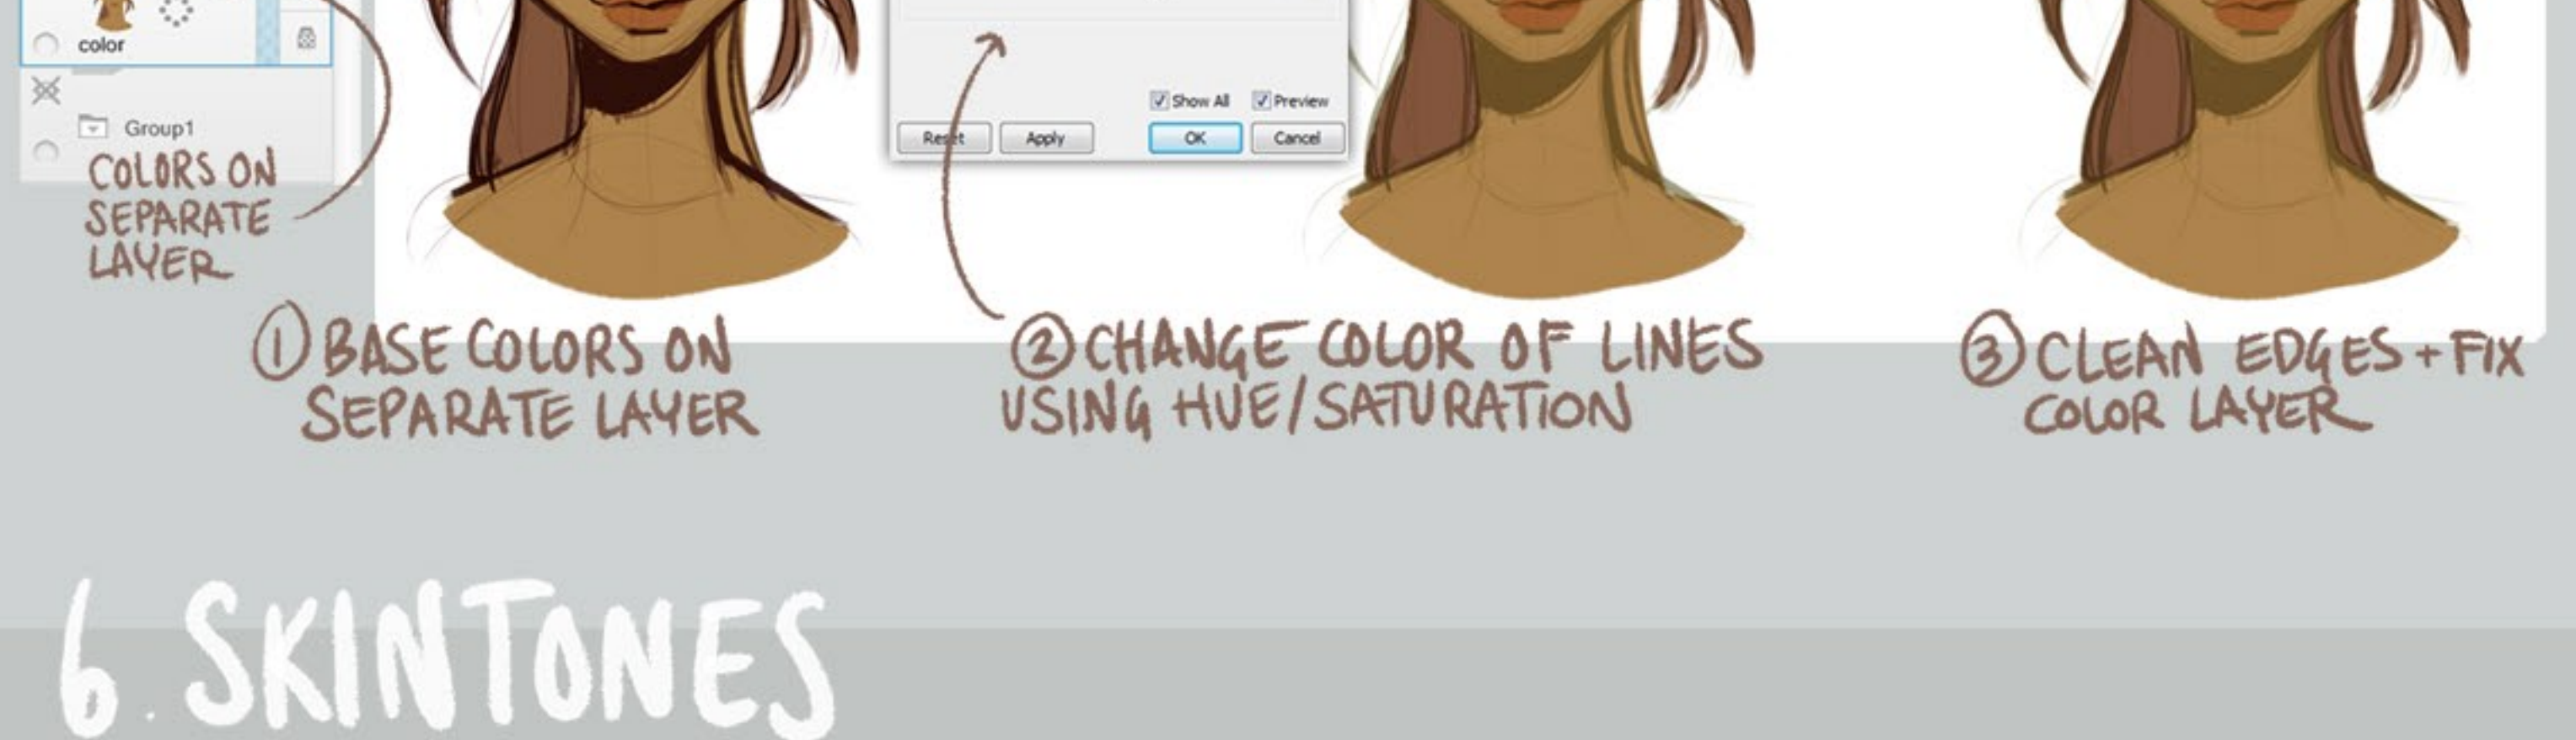

The mouth is a very important feature for communicating emotion, especially the corners of the mouth – are they downturned, pinched, smiling?

4. LINEWORK

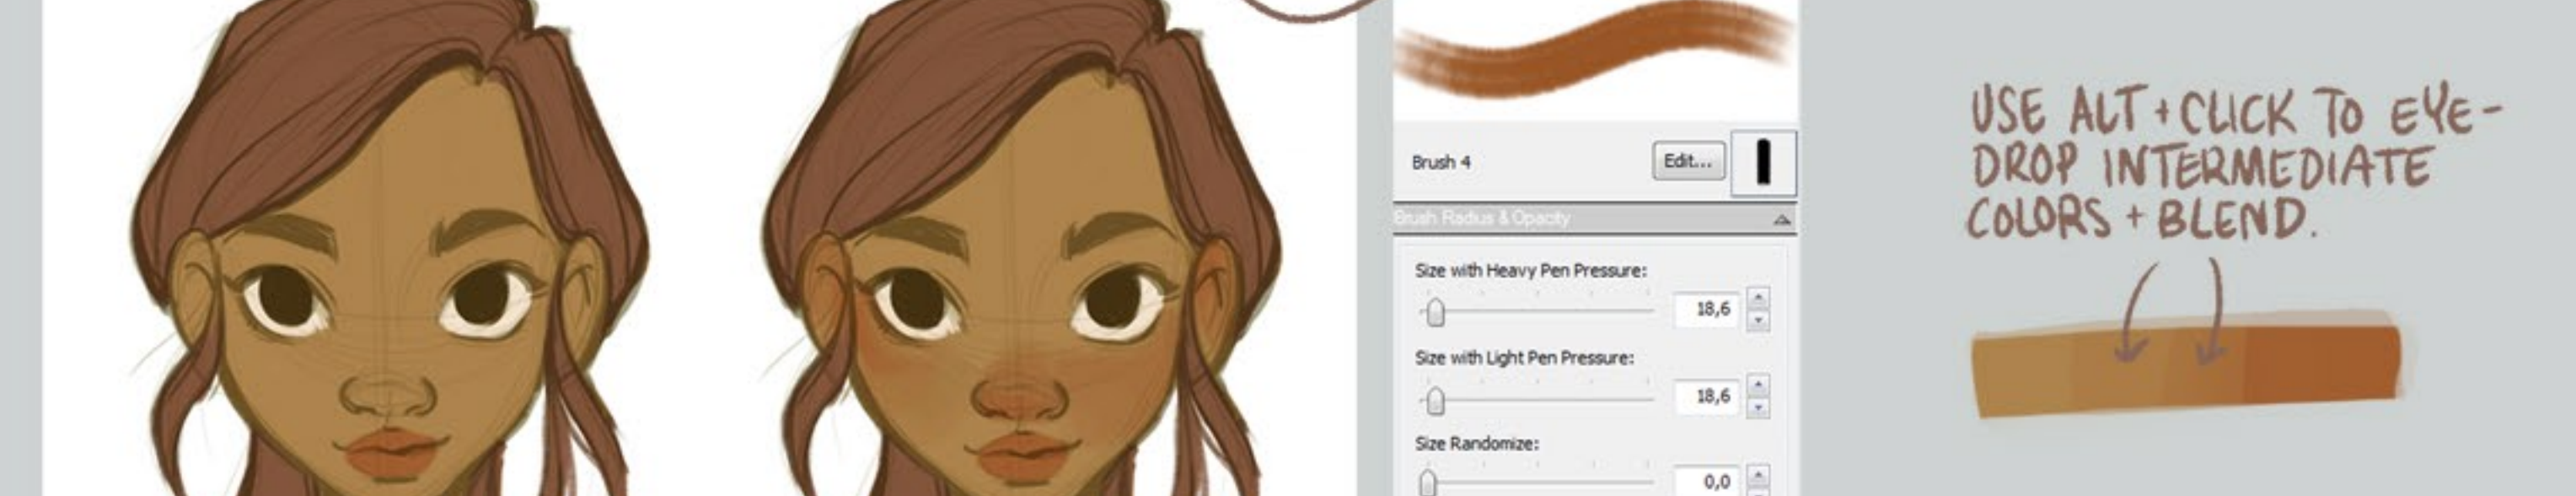

5. BASE COLORS

At this point, I merge the sketch layers together, using the method below to keep the separated layers as a backup. If the guide lines or rough sketch are showing through too strongly, I lower the opacity on those layers before merging, but you can also just turn them off completely.

In a layer below, I lay down the base colors, and then set the merged line work layer to 'multiply'. I then modify the colors of this layer using hue/saturation, so that they blend nicely with the base colors below. I like to experiment with this, sometimes choosing very bright colors for the lines, sometimes more neutral colors. It depends entirely on how the lines interact with the base layer, and what 'feels right' to me.

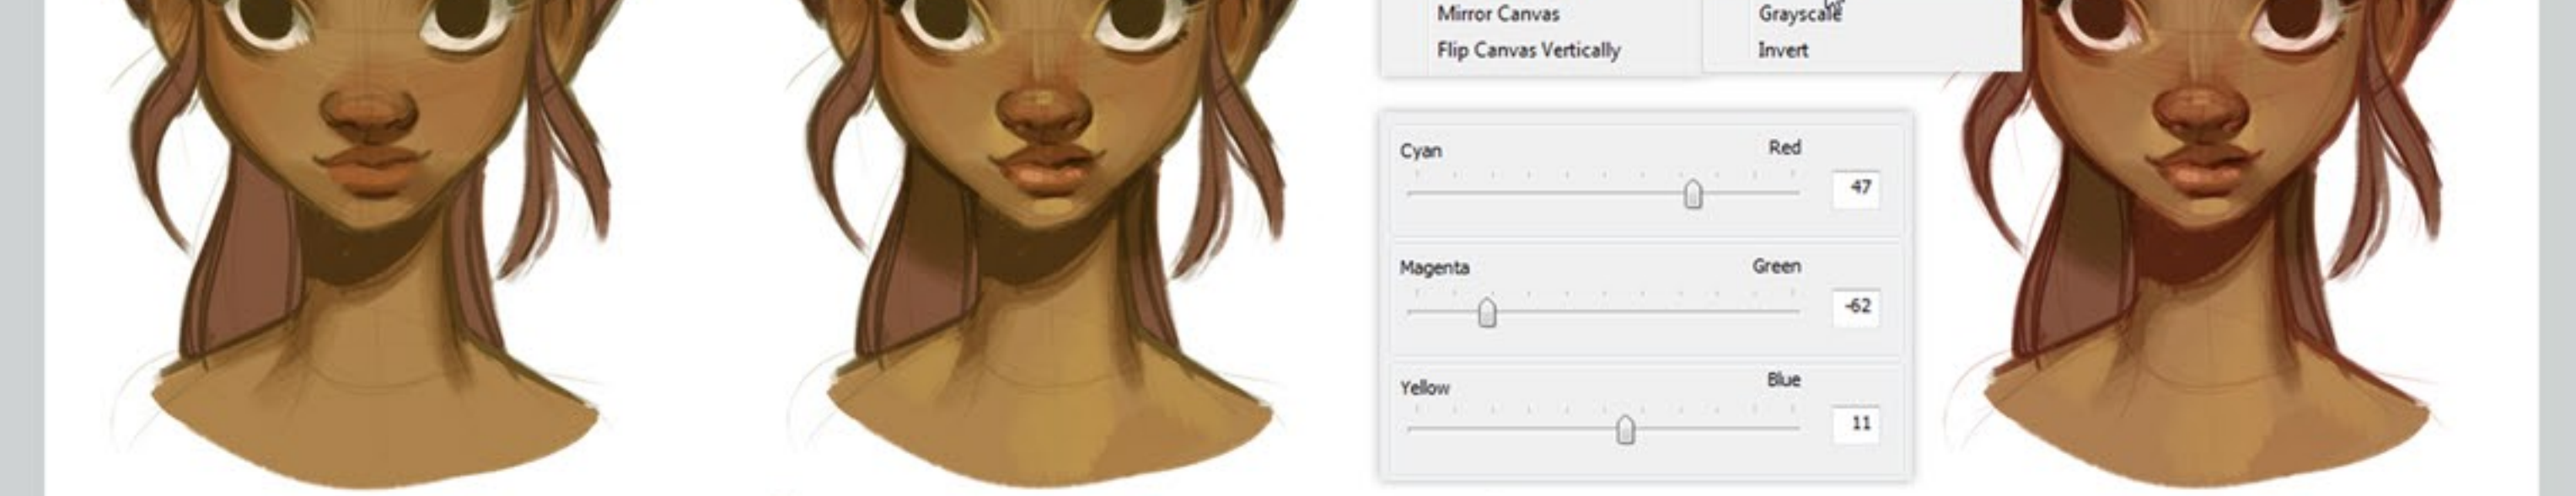

6. SKINTONES

In order to give life to the skin, it's important to add some variations in the skin tone. I added color variations on the cheeks, nose, lips and ears.

I choose colors manually from the color editor panel. I like to pick colors that aren't just lighter/darker variations of the base color, which can result in flat or lifeless skin. I try to choose rich colors that give depth and texture to the base color.

Now I add shading to the face. I try to envision how the three a soft light shape of the head would interact with a light source, so the first step is to figure out where the light is coming from. In this case, I chose a soft light coming from above. I also modify the colors a bit, because I felt the faces were becoming a bit dull.

A common mistake for people starting out with digital art is to paint very soft, gradual shading in hues that are simply lighter/darker versions of the base color. The end result tends to be a bit flat and lifeless. I personally recommend making your shadows and highlights a slightly different hue than the base color, and to also add some sharp, crisp shadows alongside the softer shading.

8. DETAILS + FINISHING TOUCHES

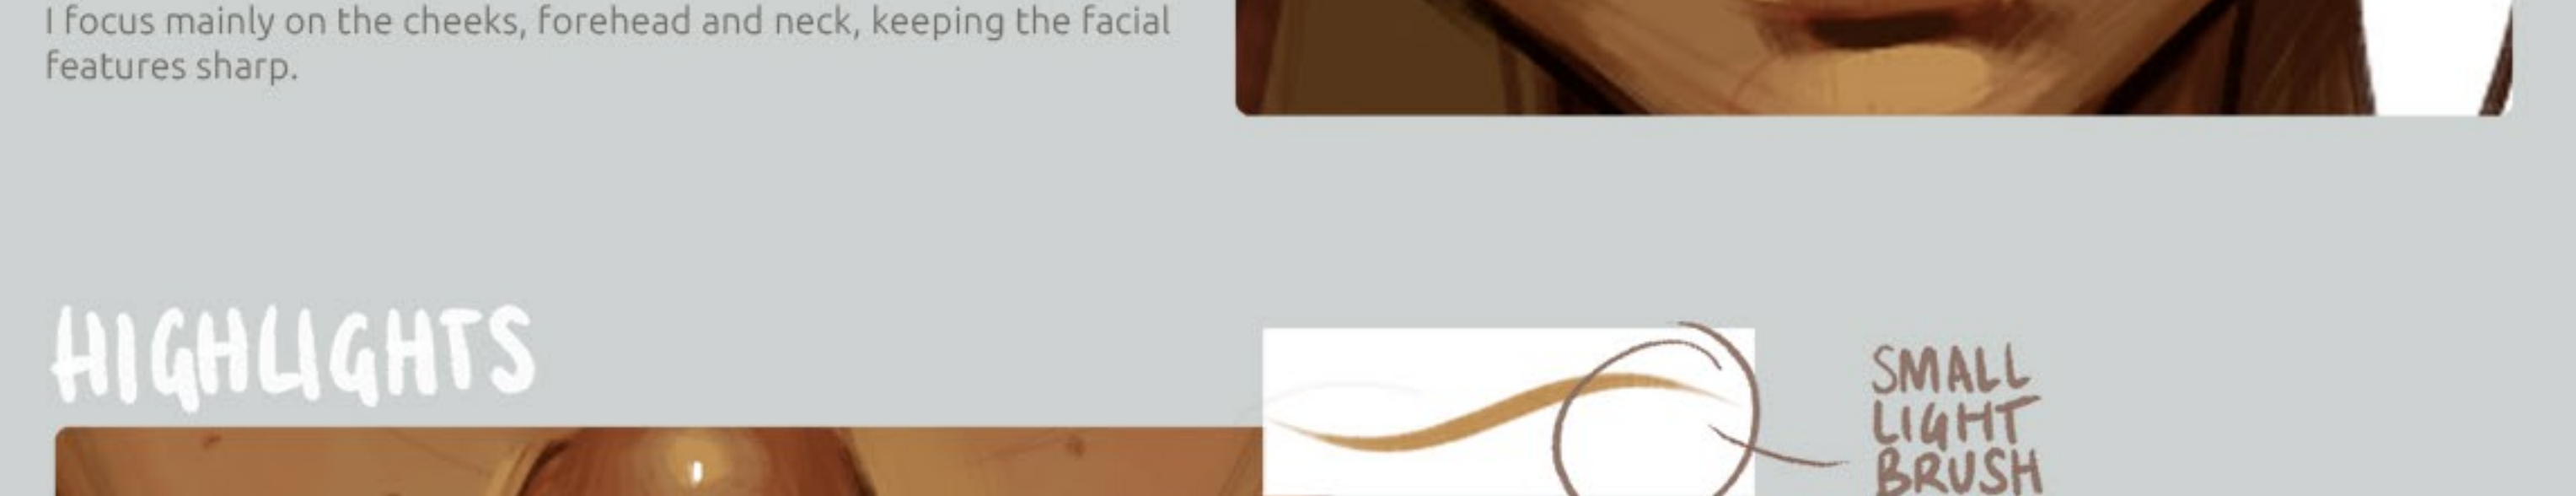

At this point, I merge the color and line layer. Many artists prefer to keep line work separated from the color layer, but I prefer having everything in one place. This way, I can paint over the lines, and erase parts of the drawing without having to switch layers. Be sure to make a backup of the layers before merging (described in step 5) so that you can always go back to your old version if needed.

Depending on how realistic and detailed I want the end result to be, I can spend a lot of time on this final phase, sometimes painting over the lines completely. In this case, I'm leaving it rough, with some of the sketch lines still showing through.

To smooth out the skin, I use alt+click to pick colors off of the drawing, and then paint with a large, soft brush set to a low opacity.

I focus mainly on the cheeks, forehead and neck, keeping the facial features sharp.

Adding freckles, wrinkles, moles, and other marks to the skin helps add more detail to a piece, as well as give the face personality.

As you can see, I don't mind a rough or sketchy end result, and I'm also not very concerned with symmetry. I personally think imperfections add a lot to the character and personality of a face, and I also really like the effect of sketch lines.

If you are seeking a cleaner and smoother end result, an option is to turn off your sketch layers early on and spend more time on the final phase, smoothing out the colors more and refining the details.

I hope you guys found this tutorial useful!
